

Microsoft Copilot

INCREASE BUSINESS PRODUCTIVITY

INTRODUCTION

Drive productivity and gain a competitive advantage with **Microsoft Copilot**

AI has revolutionised operations. More businesses are adopting AI-driven tools, including Microsoft Copilot, to improve productivity and stay competitive.

This shift requires a workforce skilled in using Copilot efficiently – whilst ensuring data security. That's where our Academy comes in.

We support your company's transition to Copilot by equipping your team with advanced AI skills and data privacy best practices. We can help your team use Copilot to automate tasks, problem-solve and achieve key business outcomes. Without compromising sensitive information or service quality.

We can develop a strategic roadmap and ensure efficient **Copilot workflows for your team**

To help your business stay ahead in a competitive landscape. *Now you can:*

Data security and privacy

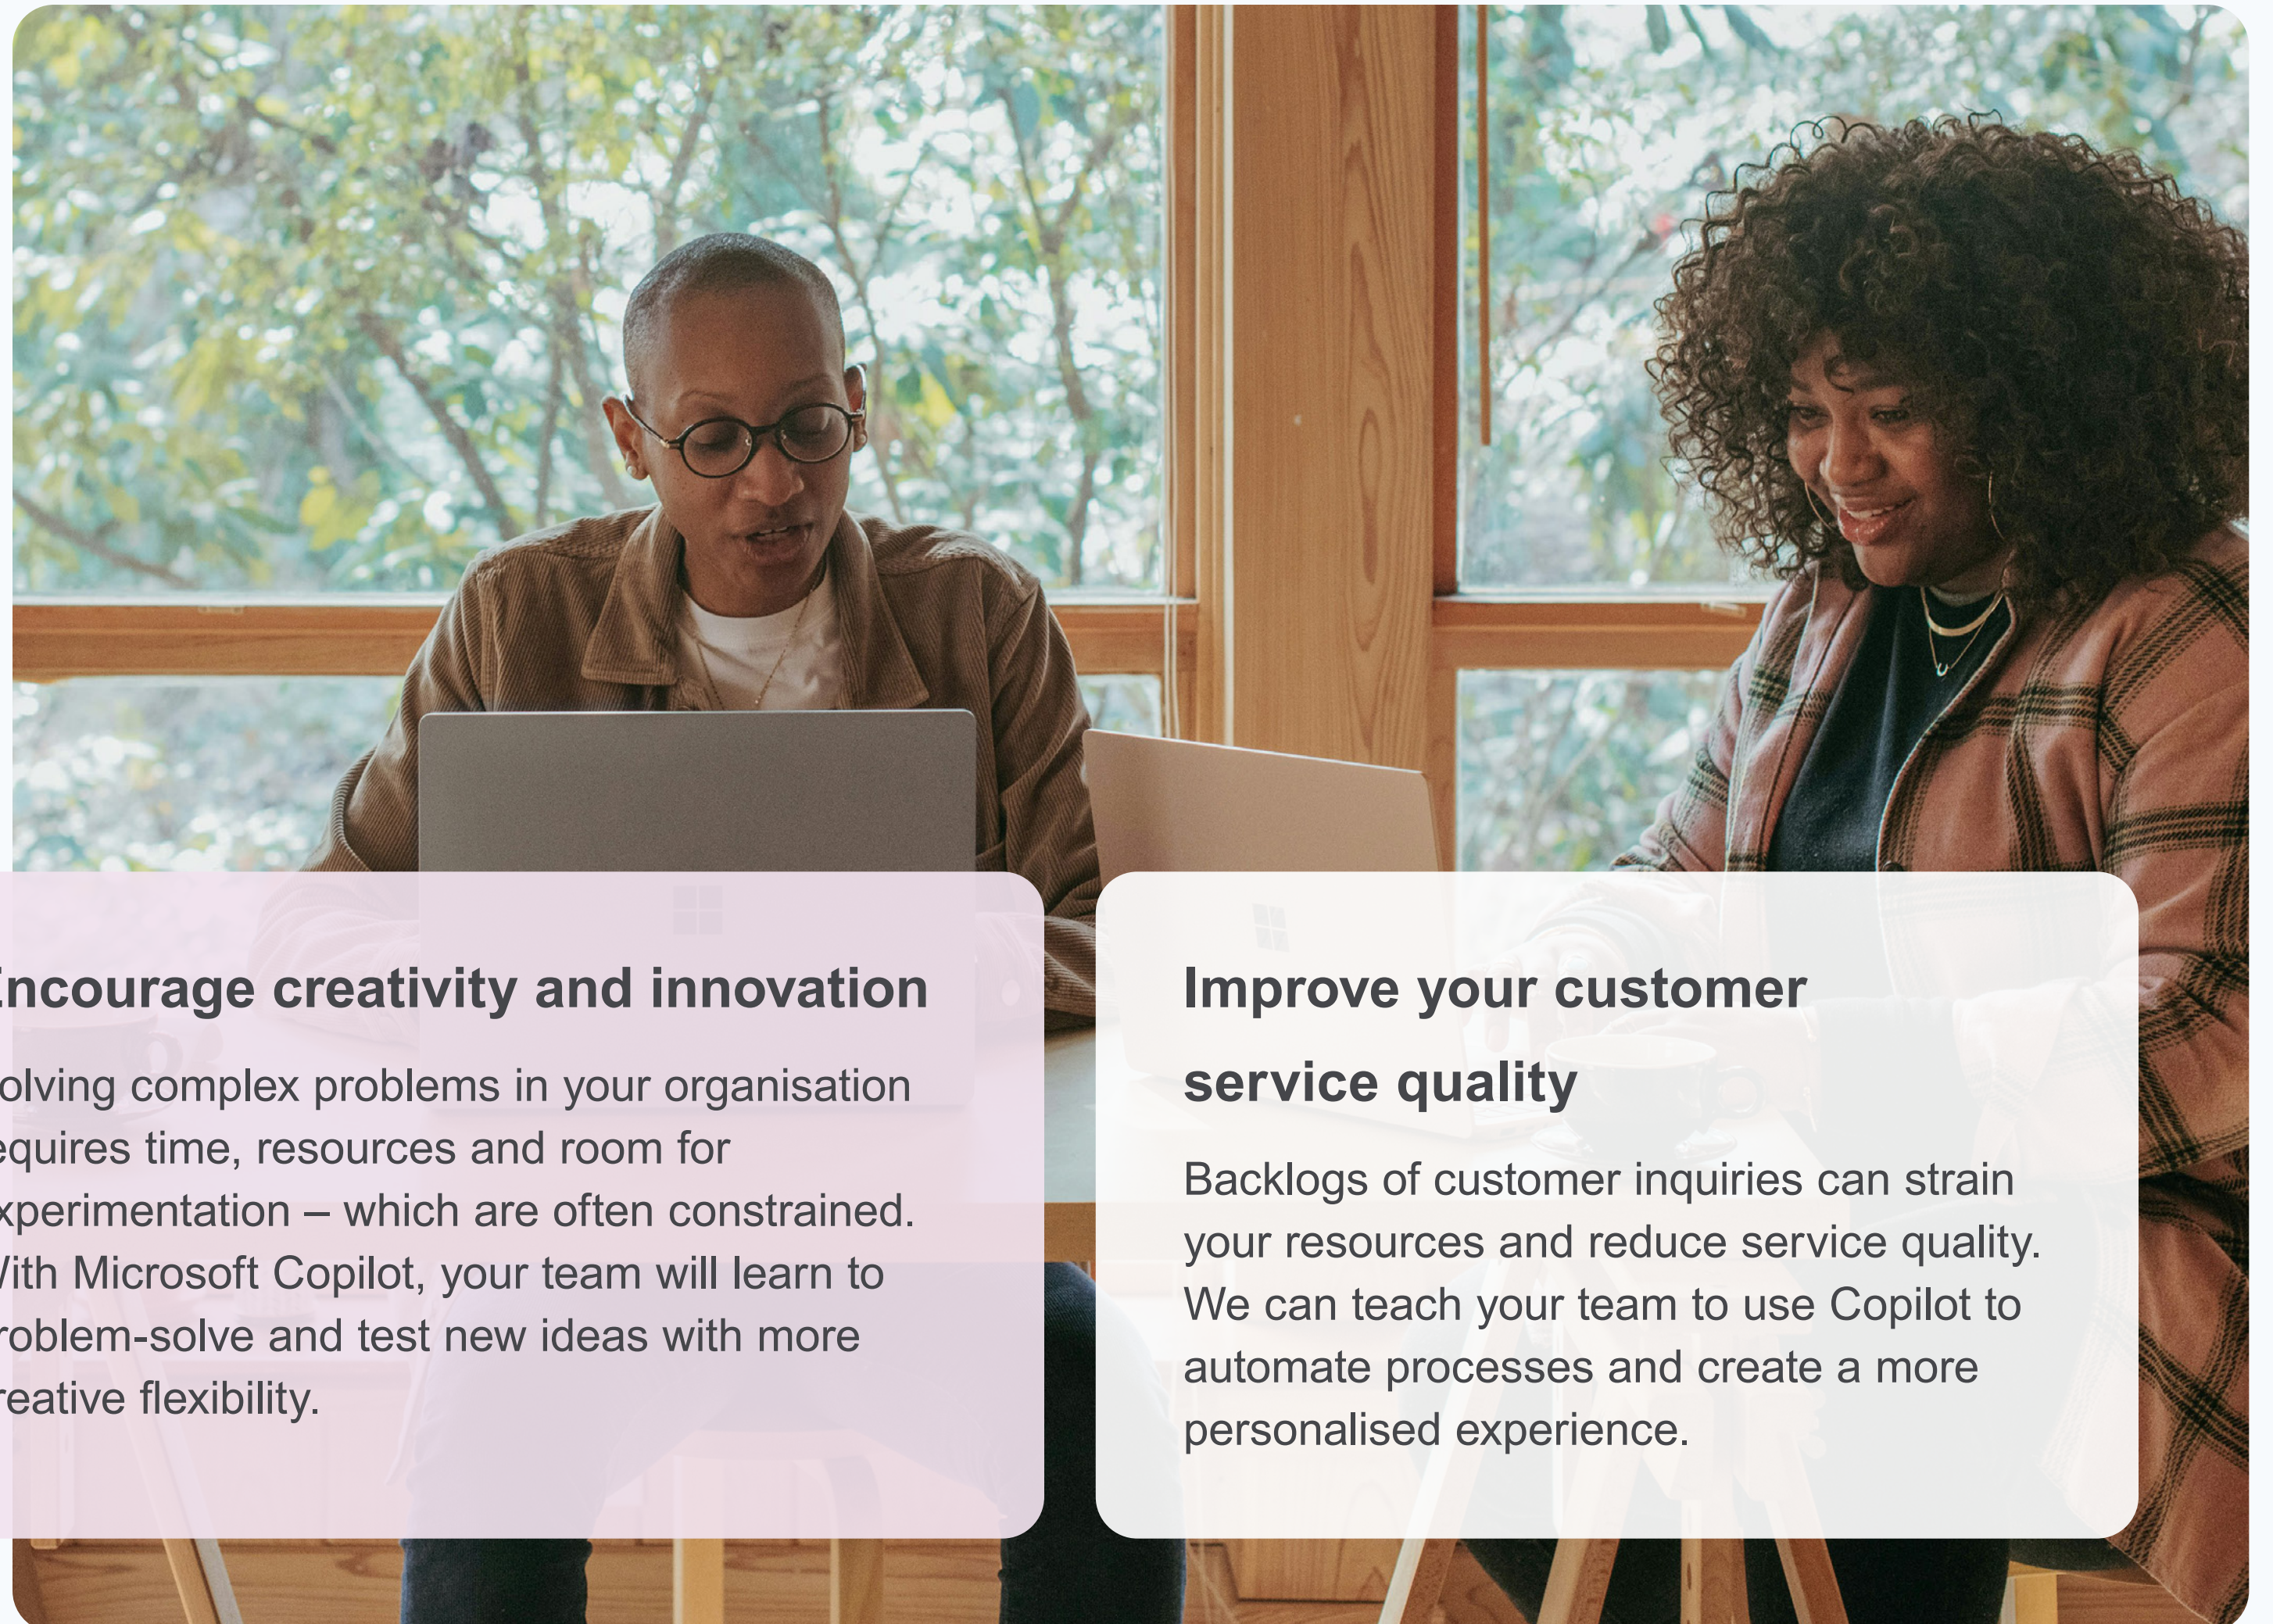

It's crucial that your team protects sensitive information whilst using Copilot, to safeguard from any potential security breaches. So our training will instill your team with best practices to ensure data security and privacy.

Encourage creativity and innovation

Solving complex problems in your organisation requires time, resources and room for experimentation – which are often constrained. With Microsoft Copilot, your team will learn to problem-solve and test new ideas with more creative flexibility.

Improve your customer service quality

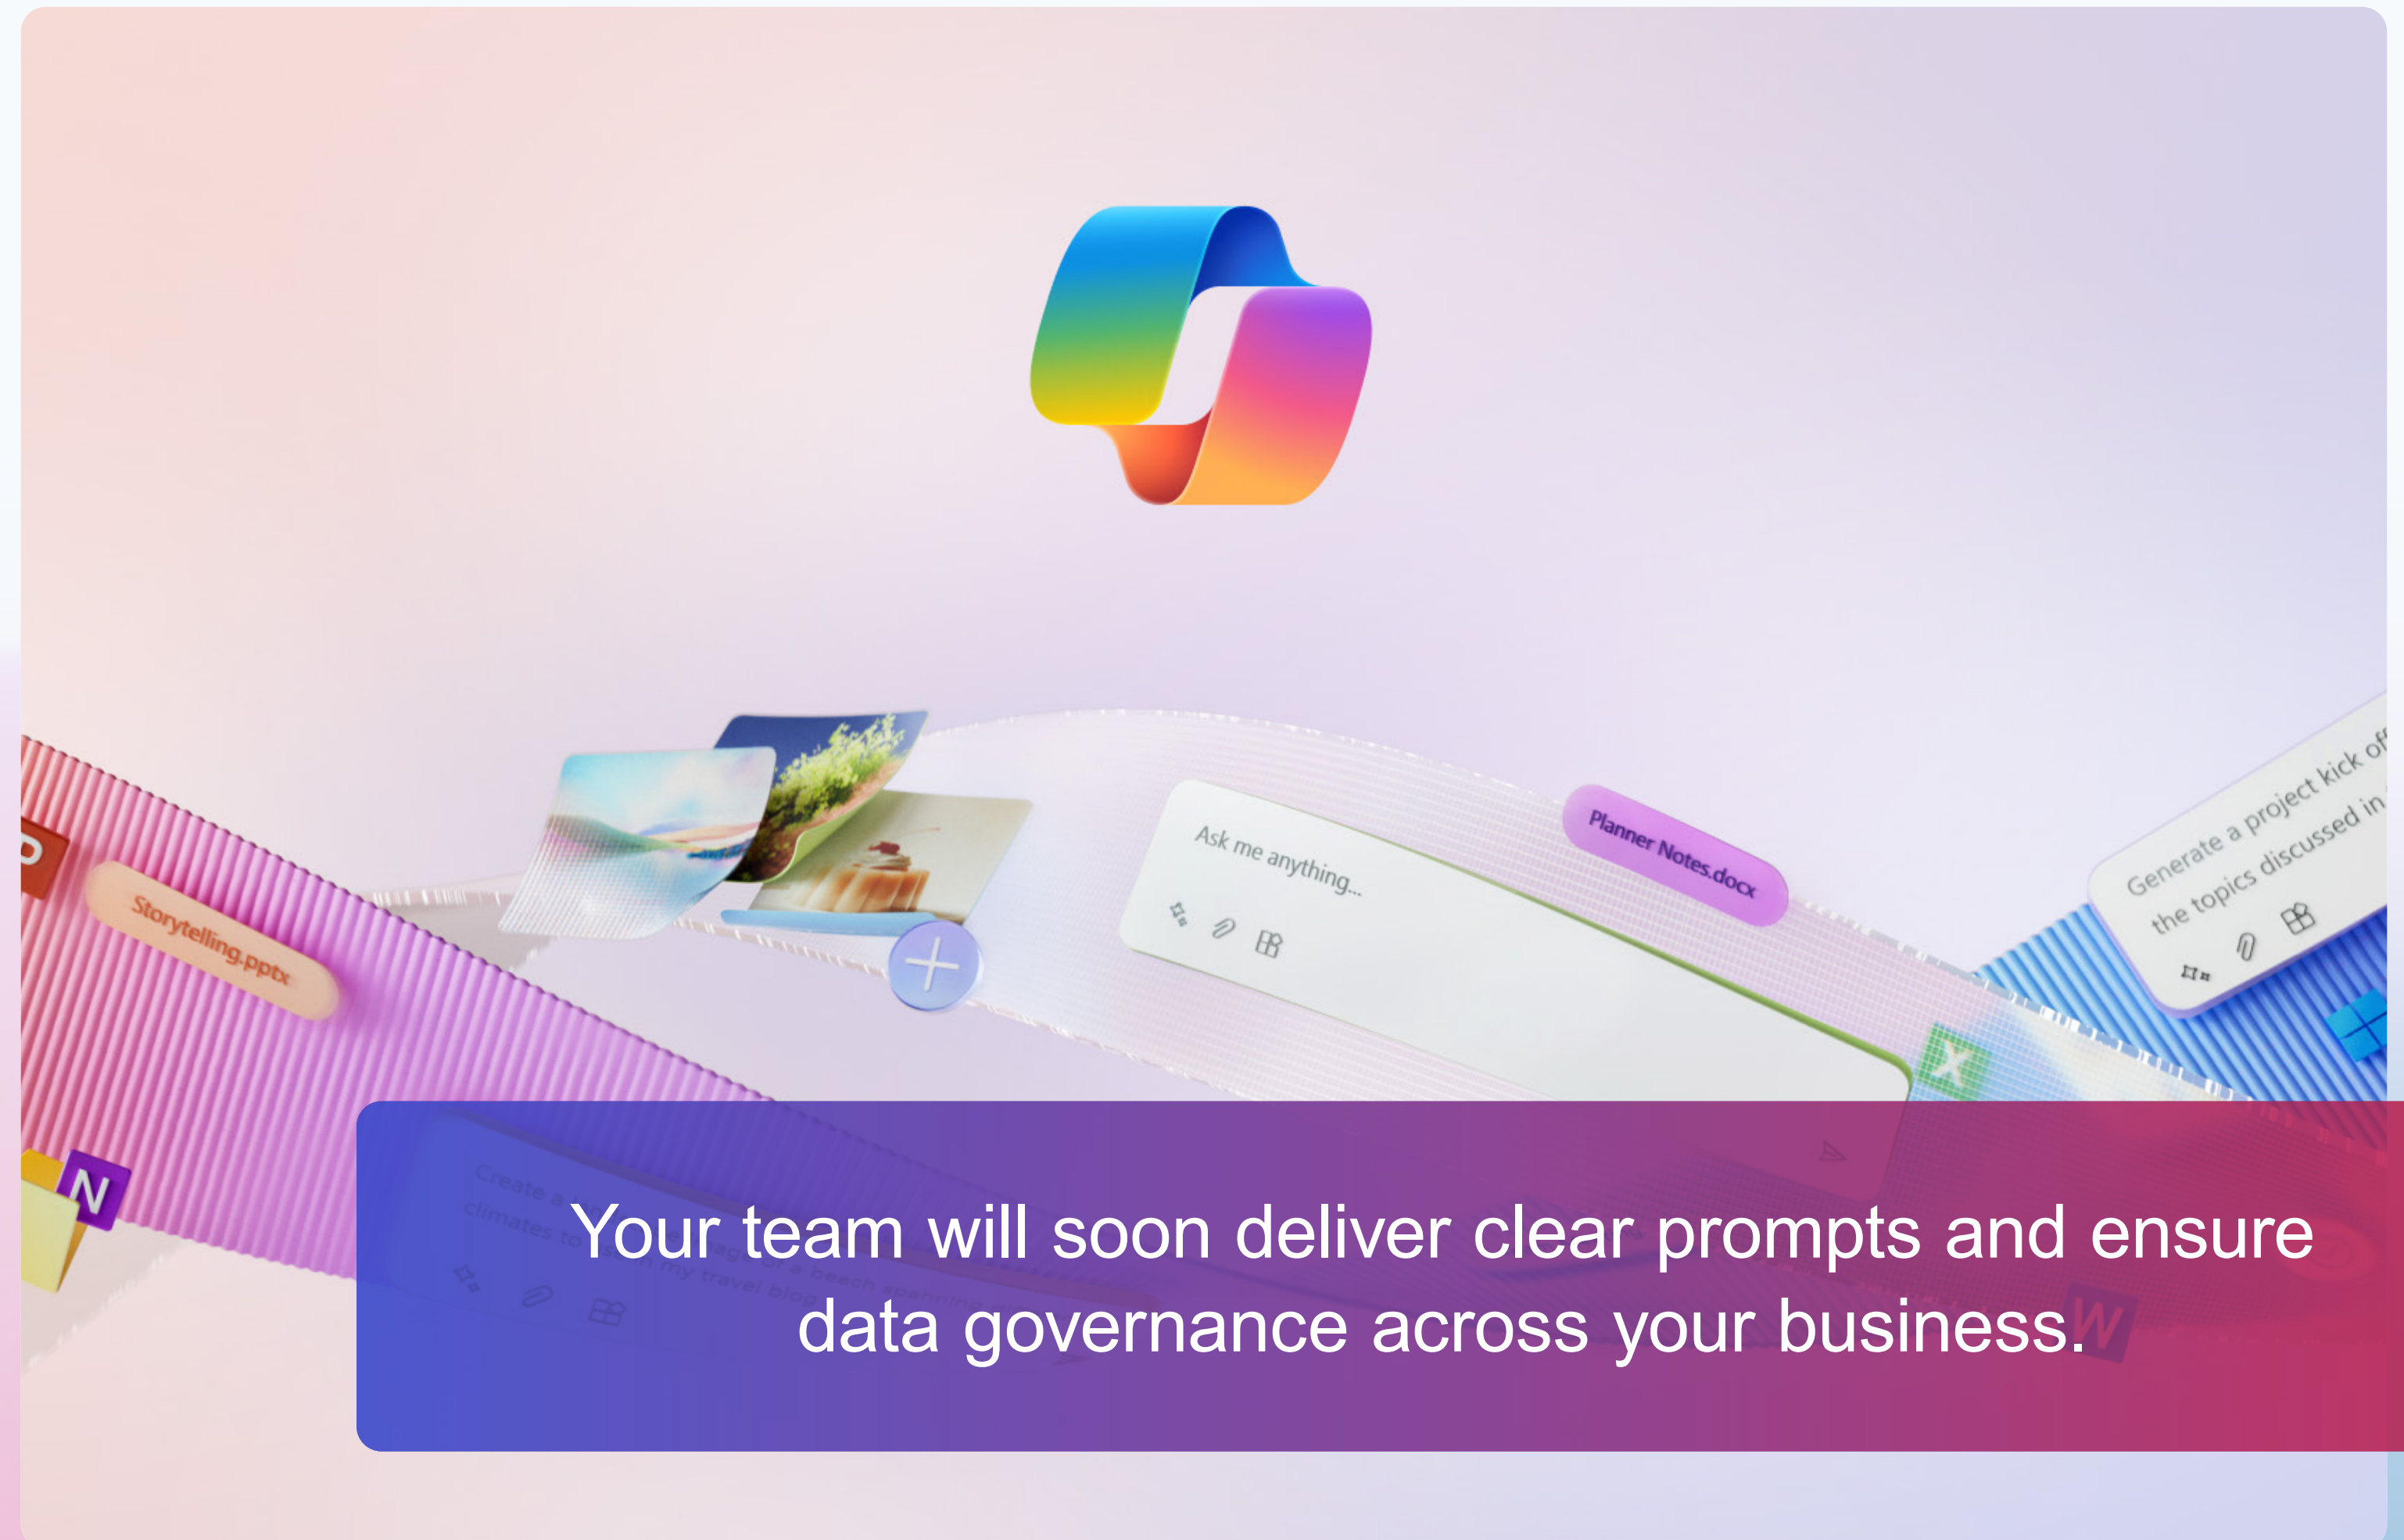

Backlogs of customer inquiries can strain your resources and reduce service quality. We can teach your team to use Copilot to automate processes and create a more personalised experience.

Why we're The top choice

We offer proof of concept funding, security advice, training workshops, video content and demonstrations.

Reflective IT takes the time to engage with your business and IT stakeholders – so we can align your key business objectives with your company's Copilot roll-out.

Your team will soon deliver clear prompts and ensure data governance across your business.

Why we're

The top choice

We can address any key concerns you might have around:

Data security and privacy

It's crucial that your team protects sensitive information whilst using Copilot, to safeguard from any potential security breaches. So our training will instill your team with best practices to ensure data security and privacy.

Cost-effective usage

Your stakeholders could be uncertain on when you'll see returns from Copilot. Our workshops will help you understand how to maximise RoI from Copilot within the first 12 months.

**Transition into the future of AI
with confidence – supported
by our expert guidance.**

Integration

You might be concerned that integrating Copilot will be complex and disruptive. We can help tailor your integration strategy to align with your business goals and infrastructure. This helps ensure minimal disruption to daily operations.

Trust in AI

There's often a perception that AI tools are too complex and unreliable. Our training helps your team develop critical thinking skills and make informed decisions, so they can navigate Copilot effectively.

Microsoft Copilot Workshop

Enjoy a complimentary workshop. Learn how Copilot can improve your operational efficiency and security posture, enabling you to streamline processes and mitigate risks.
